Direct Instruction — Take Notes

Direct Instruction — Take Notes

Follow along with the lesson. Fill in the blanks and examples.

Common Error — Watch Out!

✗ $3(x + 4) = 3x + 4$ (**first term only**) ✓ $3(x + 4) = 3x + 12$ (**distribute to every term**)

✗ $-2(x - 5) = -2x - 5$ (**lost the sign**) ✓ $-2(x - 5) = -2x + 10$ (**negative times negative**)

Culture Connection — Minnesota Stories

Culture Connection — Minnesota Stories

The Ojibwe seasonal migration followed the ‘Sugar Bush’ (maple sugaring) in spring and wild rice harvesting in late summer. Manoomin (wild rice) is sacred to the Ojibwe people.

Math Connection:

An Ojibwe ricer uses the distributive property: $2(3x + 5)$ = total pounds of manoomin from x canoes. Simplified form: $6x + 10$. If $x = 3$ canoes, find the total.
